Biotin anti-mouse CD4

Catalog # / Size: $1102015 / 50 \mu g$

1102020 / 500 µg

Clone:

Isotype: Rat IgG2b, κ

Immunogen: Mouse CTL clone V4

Reactivity: Mouse

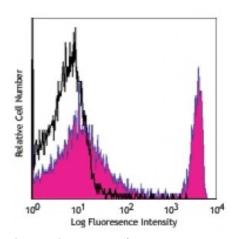

Preparation: The antibody was purified by affinity

chromatography, and conjugated with biotin under optimal conditions. The solution is free of unconjugated biotin.

Phosphate-buffered solution, pH 7.2, Formulation:

containing 0.09% sodium azide.

Concentration: 0.5

C57BL/6 mouse splenocytes were stained with biotinylated CD4 (clone GK1.5) (filled histogram) or rat IaG2b, κ isotype control (open histogram), followed by Sav-PE.

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of

this reagent is ≤ 0.25 microg per 10^6 cells in 100 microL volume. It is

recommended that the reagent be titrated for optimal performance for each

application.

Application Notes:

Additional reported applications (for the relevant formats) include: blocking of CD4⁺ T cell activation^{1,4,11}, thymocyte costimulation3, *in vitro* and *in vivo* depletion^{2,5-8}, blocking of egg-sperm cell adhesion^{1,4}, immunohistochemical staining of acetone-fixed frozen sections 9,10 , and immunoprecipitation 1,2 . The GK1.5 antibody is able to block CD4 mediated cell adhesion and T cell activation. Binding of GK1.5 antibody to CD4 T cells can be blocked by RM4-5 antibody (Cat. No. 100506), but not RM4-4 antibody (Cat. No. 116002). The LEAF™ purified antibody (Endotoxin <0.1 EU/μg, Azide-Free, 0.2 μm filtered) is recommended for functional assays (Cat. No. 100416). For in vivo studies or highly sensitive assays, we recommend Ultra-LEAF™ purified antibody (Cat. No. 100442) with a lower endotoxin limit than standard LEAF™ purified antibodies (Endotoxin < 0.01 EU/microg).

Description: CD4 is a 55 kD protein also known as L3T4 or T4. It is a member of the Ig

superfamily, primarily expressed on most thymocytes, a subset of T cells, and weakly on macrophages and dendritic cells. It acts as a coreceptor with the TCR during T cell activation and thymic differentiation by binding MHC class II and

associating with the protein tyrosin kinase, lck.
