## Spark YG<sup>™</sup> 593 anti-mouse CD4

Catalog # / Size:	1102435 / 25 μg 1102440 / 100 μg
Clone:	GK1.5
lsotype:	Rat IgG2b, к
Immunogen:	Mouse CTL clone V4
Reactivity:	Mouse
Preparation:	The antibody was purified by affinity chromatography and conjugated with Spark YG <sup>™</sup> 593 under optimal conditions.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide
Concentration:	0.5 mg/mL

C57BL/6 mouse splenocytes cells were stained with anti-mouse CD3 APC and anti-mouse CD4 (clone GK1.5) Spark YG<sup>™</sup> 593 (left) or anti-mouse CD3 APC only (right).

## **Applications:**

Applications: Flow Cytometry

**Recommended** Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is  $\leq 0.25 \ \mu$ g per million cells in 100  $\mu$ L volume. It is recommended that the reagent be titrated for optimal performance for each application.

\* Spark YG  $^{\rm m}$  593 has a maximum excitation of 573 nm and a maximum emission of 593 nm.

Application Notes: Additional reported applications (for the relevant formats) include: blocking of CD4<sup>+</sup> T cell activation<sup>1,4,11</sup>, thymocyte costimulation<sup>3</sup>, *in vitro* and *in vivo* depletion<sup>2,5-8</sup>, blocking of egg-sperm cell adhesion<sup>1,4</sup>, immunohistochemical staining of acetone-fixed frozen sections<sup>9,10</sup>, and immunoprecipitation<sup>1,2</sup>. The GK1.5 antibody is able to block CD4 mediated cell adhesion and T cell activation. Binding of GK1.5 antibody to CD4 T cells can be blocked by RM4-5 antibody, but not RM4-4 antibody. For *in vivo* studies or highly sensitive assays, we recommend Ultra-LEAF <sup>™</sup> purified antibody (Cat. No. 100442) with a lower endotoxin limit than standard LEAF <sup>™</sup> purified antibodies (Endotoxin < 0.01 EU/µg).</p>

Description:	CD4 is a 55 kD protein also known as L3T4 or T4. It is a member of the Ig superfamily, primarily expressed on most thymocytes, a subset of T cells, and weakly on macrophages and dendritic cells. It acts as a coreceptor with the TCR during T cell activation and thymic differentiation by binding MHC class II and associating with the protein tyrosin kinase, Ick.
