Product Data Sheet

Alexa Fluor® 647 anti-mouse CD5

Catalog # / Size:	1103065 / 25 μg 1103070 / 100 μg
Clone:	53-7.3
Isotype:	Rat IgG2a, к
Immunogen:	Mouse thymus or spleen
Reactivity:	Mouse
Preparation:	The antibody was purified by affinity chromatography, and conjugated with Alexa Fluor® 647 under optimal conditions.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
Concentration:	0.5

C57BL/6 mouse splenocytes stained with 53-7.3 Alexa Fluor® 647

Applications:

Applications:	Immunofluorescence
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.25 microg per 10^6 cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.
	* Alexa Fluor ${ m I}$ 647 has a maximum emission of 668 nm when it is excited at 633nm / 635nm.
Application Notes:	Additional reported applications (for the relevant formats) include: immunoprecipitation1, and immunohistochemistry2 of acetone-fixed frozen tissue sections, zinc-fixed paraffin-embedded sections and formalin-fixed paraffin- embedded sections.

Description:	CD5 is a 67 kD protein, also known as Lyt-1, Ly-1, T1, Tp67, or Ly-12. It is a member of the scavenger receptor cysteine-rich protein superfamily (SRCR) and primarily expressed on thymocytes, T cells, and B-1 cells. Although mature α/β T cells express high levels of CD5, very few γ/δ T cells express this antigen. The interaction of CD5 with CD72, gp35-37, TCR, or BCR is involved in T and B cell activation.
