APC anti-mouse CD5

Catalog # / 1103130 / 100 µg

Size: $1103125 / 25 \mu g$

Clone: 53-7.3

Isotype: Rat IgG2a, ĸ

Immunogen: Mouse thymus or spleen

Reactivity: Mouse

The antibody was purified by affinity **Preparation:**

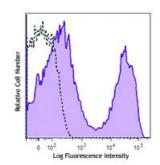

> chromatography and conjugated with APC under optimal conditions. The solution is free of unconjugated APC

and unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2

C57BL/6 mouse splenocytes were stained with CD5 (clone 53-7.3) APC (filled histogram) or rat IgG2a APC isotype control (open

histogram).

Applications:

Applications: Flow Cytometry

Recommended

Each lot of this antibody is quality control tested by immunofluorescent **Usage:**

staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤0.25 microg per million cells in 100 microL

volume. It is recommended that the reagent be titrated for optimal

performance for each application.

Additional reported applications (for the relevant formats) include: Application

Notes: immunoprecipitation1, and immunohistochemistry2 of acetone-fixed frozen

tissue sections, zinc-fixed paraffin-embedded sections and formalin-fixed

paraffin-embedded sections.

Description: CD5 is a 67 kD protein, also known as Lyt-1, Ly-1, T1, Tp67, or Ly-12. It is a

> member of the scavenger receptor cysteine-rich protein superfamily (SRCR) and primarily expressed on thymocytes, T cells, and B-1 cells. Although mature α/β T cells express high levels of CD5, very few γ/δ T cells express this

> antigen. The interaction of CD5 with CD72, gp35-37, TCR, or BCR is involved in

T and B cell activation.
