APC anti-mouse CD31

Catalog # / Size: 1112050 / 100 μg

1112045 / 25 μg

Clone: 390

Isotype: Rat IgG2a, κ

Immunogen: C3H/HeJ mouse hematopoietic

progenitor cell line 3

Reactivity: Mouse

Preparation: The antibody was purified by affinity

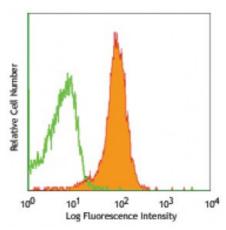

chromatography, and conjugated with APC under optimal conditions. The solution is free of unconjugated APC and

unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2

C57BL/6 splenocytes stained with

390 APC

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of

this reagent is ≤ 0.25 microg per 10^6 cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each

application.

Application Notes:

Anti-mouse CD31 clones 390 and MEC13.3 bind to their respective non-

overlapping epitopes in IgD2 of CD31.⁸ Additional reported applications (for the relevant formats) include: immunoprecipitation1, *in vitro* and *in vivo* blocking of CD31-mediated cell-cell interactions¹⁻⁴, and immunohistochemical staining^{5,6,7} of acetone-fixed frozen sections and zinc-fixed paraffin-embedded sections. **Special Note:** This antibody is not recommended for formalin-fixed paraffin-embedded sections. The LEAF $^{\text{TM}}$ purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm

filtered) is recommended for functional assays (Cat. No. 102412).

Description: CD31 is a 130-140 kD glycoprotein, also known as platelet endothelial cell

adhesion molecule (PECAM-1) and EndoCAM. It is a member of the Ig superfamily, expressed on endothelial cells, platelets, granulocytes, monocytes/macrophages, dendritic cells, and T and B cell subsets, and is critical for cell-cell interactions. The primary ligands for CD31 have been reported to be CD38 and the vitronectin receptor (α_v β_3 integrin, CD51/CD61). Other reported functions of CD31 are

neutrophil emigration to sites of inflammation and angiogenesis.
