Product Data Sheet

Purified anti-mouse CD90.2

| Catalog # / Size: | 1126505 / 50 μg 1126510 / 500 μg |
|--------------------|---|
| Clone: | 30-H12 |
| Isotype: | Rat IgG2b, к |
| Immunogen: | Mouse thymus or spleen |
| Reactivity: | Mouse |
| Preparation: | The antibody was purified by affinity chromatography. |
| Formulation: | Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide. |
| Concentration: | 0.5 |

C57BL/6 mouse thymocytes stained with purified 30-H12, followed by anti-rat IgG FITC

Applications:

| Applications: | Flow Cytometry, Immunohistochemistry |
|----------------------------|--|
| Recommended Usage: | Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.25 microg per 10^6 cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application. |
| Application Notes: | Additional reported applications (for the relevant formats) include: <i>in vivo</i> and <i>in vitro</i> depletion ^{1,2,7} , costimulation of CD3/TCR-mediated signal transduction ^{3,4} , and immunohistochemical staining5 of acetone-fixed frozen sections. The 30-H12 antibody does not react with Thy-1.1 alloantigen of the AKR/J and PL strains. To reduce non-specific binding to cells bearing Fc-receptors, pre-incubation of cells with anti-mouse CD16/CD32, clone 93 (Cat. No. 101301/101302) is recommended prior to immunofluorescent staining. The LEAF TM purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 105310). |

| Description: | CD90.2 is a 25-35 kD immunoglobulin superfamily member also known as Thy1.2. It is expressed on hematopoietic stem cells and neurons, all thymocytes, and peripheral T cells in Thy1.2 bearing mouse strains (Balb/c, CBA/J, C3H/He, C57BL/- , DBA, NZB/-). CD90.2 is a glycosylphosphatidylinositol (GPI)-anchored membrane glycoprotein involved in signal transduction. CD90.2 is involved in costimulation |

of lymphocyte proliferation and induction of hematopoietic stem cells

differentiation. CD90.2 has been shown to interact with CD45. The 30-H12 antibody has been reported to induce Ca^{2+} flux in thymocytes and, in combination with antibody against the CD3/TCR complex, promote thymocyte apoptosis and inhibit CD3-mediated proliferative responses of mature T lymphocytes.
