Product Data Sheet

APC anti-mouse CD94

Catalog # / Size: 1127555 / 25 μg

1127560 / 100 µg

Clone: 18d3

Isotype: Rat IgG2a, κ

Immunogen: CHO cells expressing the C57BL/6

alleles of CD94 and NKG2A

Reactivity: Mouse

Preparation: The antibody was purified by affinity

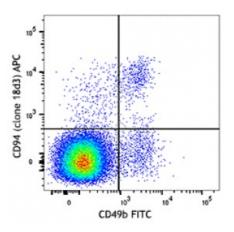

chromatography and conjugated with APC under optimal conditions. The solution is free of unconjugated APC and

unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2 mg/ml

C57BL/6 mouse splenocytes were stained with CD49b (pan-NK cells) FITC and CD94 (clone 18d3) APC (top) or rat IgG2a, κ APC isotype control (bottom).

Applications:

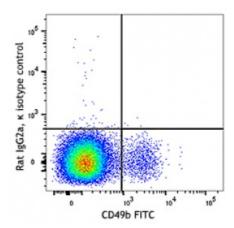

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.06 µg per million cells in 100 µl volume. It is recommended that the reagent be titrated for optimal performance for

each application.

Description:

CD94 is a 43/39 kD C-type lectin, also known as Kp43. It is present on all NK cells, NKT cells, and a subset of CD8-positive T lymphocytes in most mouse strains. CD94 is a type-II transmembrane protein with an extracellular lectin-like domain and a short cytoplasmic tail. CD94 is expressed as a disulphide-linked heterodimer with a NKG2 subunit believed to mediate signal transduction. When associated with NKG2A, the complex triggers inhibition; when associated with NKG2C, the complex triggers stimulation. The receptor complex of CD94 and NKG2 receptors bind to the ligand, Qa-1, and are thought to play a role in maintaining self-tolerance in developing NK cells.
