## **Product Data Sheet**

## FITC anti-mouse I-A/I-E

Catalog # / Size:	1138030 / 500 μg 1138025 / 50 μg
Clone:	M5/114.15.2
Isotype:	Rat IgG2b, κ
Immunogen:	Activated C57BL/6 mouse spleen cells
<b>Reactivity:</b>	Mouse
Preparation:	The antibody was purified by affinity
	chromatography, and conjugated with FITC under optimal conditions. The solution is free of unconjugated FITC.
Formulation:	chromatography, and conjugated with FITC under optimal conditions. The

C57BL/6 mouse splenocytes were stained with anti-mouse I-A/I-E (clone M5/114.15.2) FITC (solid line) or rat IgG2b, κ FITC isotype control (dashed line).

## **Applications:**

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is $\leq 0.25$ microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.
Application Notes:	The M5/114.15.2 antibody reacts with a polymorphic determinant shared by the I-Ab, I-Ad, I-A <sup>q</sup> , I-Ed, and I-Eκ MHC class II alloantigens from mice carrying H-2 <sup>p,r,q,b,d,u</sup> haplotypes. Clone M5/114.15.2 however does not react wtih I-A <sup>f</sup> , I-Aκ, or I-A <sup>s</sup> MHC class II alloantigens.1
	Additional reported applications (for the relevant formats) include: immunoprecipitation1, immunohistochemistry of frozen sections <sup>2,3,6</sup> , and <i>in vitro</i> and <i>in vivo</i> blocking of antigen presentation or ligand binding <sup>4-7</sup> . The LEAF <sup>TM</sup> purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 107610).

Description:	These class II molecules are expressed on antigen presenting cells (including B cells) and a subset of T cells from H-2 <sup>b,d,q,r</sup> bearing mice and are involved in antigen presentation to T cells expressing CD3/TCR and CD4 proteins.
