PE anti-mouse Ly-6A/E (Sca-1)

Catalog # / Size: 1140540 / 200 μg

1140535 / 50 μg

Clone: D7

Isotype: Rat IgG2a, κ

Immunogen: IL-2-dependent mouse T-cell line (CTL-L)

Reactivity: Mouse

Preparation: The antibody was purified by affinity

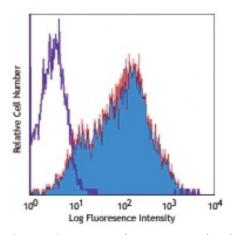

chromatography, and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and

unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2

C57BL/6 mouse splenocytes stained with D7 PE

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.5 microg per million cells in 100 microL volume. It is

this reagent is \leq 0.5 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each

application.

Application Notes:

The D7 antibody has been reported to induce T cell activation and inhibit TCR-induced IL-2 production. Additional reported applications (for the relevant formats) include: Western blotting^{1,2}, immunoprecipitation1, *in vitro* lymphocyte

activation³⁻⁶, induction of redirected lysis⁷, induction of T cell inhibitory signalling⁸, immunofluorescence⁹, and immunohistochemical staining of acetone-

fixed frozen sections¹³ and Bouin-fixed, paraffin-embedded samples⁹.

The two Sca-1 recognizing clones D7 and $\underline{\text{E13-161.7}}$ have been shown to bind distinct epitopes due to the inability of D7 to block the binding of E13-161.7.¹⁴

Description:

Ly-6A/E, also known as Sca-1, is an 18 kD member of the Ly-6 multigene family. Ly6A/E is a glycosylphosphatidylinositol (GPI)-linked protein expressed on hematopoietic stem cells. In mice expressing the Ly-6.2 haplotype (e.g., AKR, C57BL, C57BR, DBA/2, SJL, SWR, and 129), Ly-6A/E is also expressed on peripheral B lymphocytes and thymic and peripheral T lymphocytes. Strains expressing the Ly-6.1 haplotype (e.g., BALB/c, CBA, C3H/He, DBA/1, and NZB) have low Ly-6A/E expression on resting peripheral lymphocytes. The expression of Ly-6A/E on lymphocytes is upregulated upon activation from both Ly6.1 and Ly6.2 haplotype mice. Ly-6A/E is thought to be involved in the regulation of both T and B cell responses.
