PE/Cy7 anti-mouse Ly-6A/E (Sca-1)

Catalog # / Size: $1140565 / 25 \mu g$

1140570 / 100 μg

Clone: D7

Isotype: Rat IgG2a, κ

Immunogen: IL-2-dependent mouse T-cell line (CTL-L)

Reactivity: Mouse

Preparation: The antibody was purified by affinity

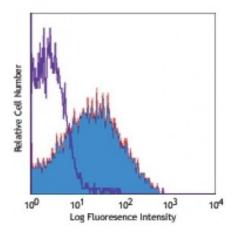

chromatography, and conjugated with PE/Cy7 under optimal conditions. The solution is free of unconjugated PE/Cy7

and unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2

C57BL/6 mouse splenocytes stained with D7 PE/Cy7

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of

this reagent is ≤ 0.25 microg per 10^6 cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each

application.

Application Notes:

The D7 antibody has been reported to induce T cell activation and inhibit TCR-induced IL-2 production. Additional reported applications (for the relevant formats) include: Western blotting^{1,2}, immunoprecipitation1, *in vitro* lymphocyte

activation³⁻⁶, induction of redirected lysis⁷, induction of T cell inhibitory

signalling⁸, immunofluorescence⁹, and immunohistochemical staining of acetonefixed frozen sections¹³ and Bouin-fixed, paraffin-embedded samples⁹.

The two Sca-1 recognizing clones D7 and $\underline{\text{E13-161.7}}$ have been shown to bind distinct epitopes due to the inability of D7 to block the binding of E13-161.7.¹⁴

Description:

Ly-6A/E, also known as Sca-1, is an 18 kD member of the Ly-6 multigene family. Ly6A/E is a glycosylphosphatidylinositol (GPI)-linked protein expressed on hematopoietic stem cells. In mice expressing the Ly-6.2 haplotype (e.g., AKR, C57BL, C57BR, DBA/2, SJL, SWR, and 129), Ly-6A/E is also expressed on peripheral B lymphocytes and thymic and peripheral T lymphocytes. Strains expressing the Ly-6.1 haplotype (e.g., BALB/c, CBA, C3H/He, DBA/1, and NZB) have low Ly-6A/E expression on resting peripheral lymphocytes. The expression of Ly-6A/E on lymphocytes is upregulated upon activation from both Ly6.1 and Ly6.2 haplotype mice. Ly-6A/E is thought to be involved in the regulation of both T and B cell responses.
