Product Data Sheet

Biotin anti-mouse CD279 (PD-1)

Catalog # / Size:	1145525 / 50 μg 1145530 / 500 μg
Clone:	RMP1-30
Isotype:	Rat IgG2b, κ
Immunogen:	Mouse PD-1 transfected BHK cells
Reactivity:	Mouse
Preparation:	The antibody was purified by affinity chromatography, and conjugated with biotin under optimal conditions. The solution is free of unconjugated biotin.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
Concentration:	0.5

Con A (3-day) activated C57BL/6 mouse splenocytes stained with RMP1-30 PE

Applications:

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is \leq 1.0 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.
Application Notes:	Additional reported application (for the relevant formats) include: Functional assay. The LEAF ^{m} purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 109108). The RMP1-30 antibody does not block the binding of PD-1 to B7-H1 and B7-DC1.

Description:	CD279 is a 50-55 kD immunoglobulin superfamily member also known as programmed death-1 (PD-1). PD-1 is expressed on a subset of CD4 ⁻ CD8 ⁻ thymocytes and on activated T and B cells. PD-1 is thought to be involved in lymphocyte clonal selection and peripheral tolerance. The PD-1 ligands, PD-L1 (also known as B7-H1) and PD-L2 (B7-DC), are members of the B7 immunoglobulin superfamily.
