## **Product Data Sheet**

## **Purified anti-mouse CD253 (TRAIL)**

Catalog # / Size: 1146510 / 500 μg

> Clone: **N2B2**

Isotype: Rat IgG2a, ĸ

Mouse TRAIL-transfected 2PK-3 cells Immunogen:

Reactivity: Mouse

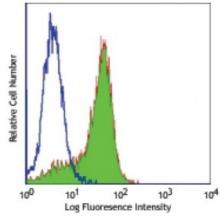

**Preparation:** The antibody was purified by affinity

chromatography.

Phosphate-buffered solution, pH 7.2, Formulation:

containing 0.09% sodium azide.

**Concentration:** 0.5

Mouse TRAIL transfected cells stained with purified N2B2, followed by anti-rat IgG FITC

## **Applications:**

**Applications:** Flow Cytometry

Recommended

**Usage:** 

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤0.25 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each

application.

**Application** 

Notes:

Additional reported applications (for the relevant formats) include: in vitro blocking of NK cell cytotoxicity  $^{1,2}$ . The LEAF  $^{\mathrm{m}}$  purified antibody (Endotoxin <0.1 EU/uq. Azide-Free, 0.2 µm filtered) is recommended for functional assays (Cat.

No. 109308).

**Description:** CD253 is a 40 kD TNF superfamily member known as TRAIL, Apo-2 ligand, and

> Apo-2L. TRAIL is expressed on a variety of cells, including IL-2 and IL-15 activated NK cells and activated T cells. However, it is undetectable on resting T and B cells. TRAIL has been reported to induce apoptosis in tumor and transformed cell lines by a caspase-dependent process. The N2B2 antibody has been reported to be useful for flow cytometric staining and blocking NK cell cytotoxicity in vitro.
