## **Product Data Sheet**

#### Spark NIR™ 685 anti-mouse CD45.2

 $\textbf{Catalog \# /} \quad 1149320\,/\,100~\mu g$ 

**Size:** 1149315 / 25 μg

**Clone:** 104

**Isotype:** Mouse IgG2a, κ

**Immunogen:** B10.S mouse thymocytes and

splenocytes

Reactivity: Mouse

**Preparation:** The antibody was purified by affinity

chromatography and conjugated with

Spark NIR™ 685 under optimal

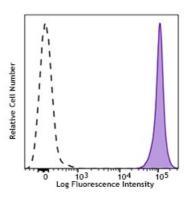

conditions.

**Formulation:** Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide

Workshop Number: 750 under optimal conditions.

Concentration: 0.5 mg/mL

C57BL/6 mouse splenocytes were stained with anti-mouse CD45.2 Spark NIR  $^{\text{TM}}$  685 (filled

histogram). Open histogram represents unstained cells.

### **Applications:**

**Applications:** Flow Cytometry

Recommended Usage:

Each lot of this antibody is quality control tested by immunofluorescent

staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is  $\leq 0.5~\mu g$  per million cells in  $100~\mu L$  volume. It is recommended that the reagent be titrated for optimal performance for each

application.

\* Spark NIR™ 685 has a maximum excitation of 665 nm and a maximum

emission of 685 nm.

Application Notes:

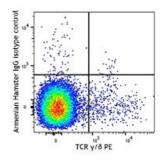

The 104 antibody does not react with mouse cells expressing the CD45.1

alloantigen. Additional reported applications (for the relevant

formats) include:

immunoprecipitation<sup>4</sup>, *in vivo* and *in vitro* blocking of B cell responses<sup>1,2</sup>, and immunohistochemical staining of

acetone-fixed frozen sections<sup>3</sup>.

#### **Description:**

CD45.2 is an alloantigen of CD45, expressed by Ly5.2 bearing mouse strains (e.g., A, AKR, BALB/c, CBA/Ca, CBA/J, C3H/He, C57BL, C57BR, C57L, C58, DBA/1, DBA/2, NZB, SWR, 129). CD45, a member of the protein tyrosine phosphatase (PTP) family, is a 180-240 kD glycoprotein expressed on all hematopoietic cells except mature erythrocytes and platelets. There are multiple isoforms in the mouse that play key roles in TCR and BCR signal transduction. These isoforms are very specific to the activation and maturation states of the cell as well as specific cell type. The primary ligands for CD45 are galectin-1, CD2, CD3, CD4, TCR, CD22, and Thy-1.
