

PE anti-mouse H-2D b

Catalog # / Size: 1157535 / 50 µg
1157540 / 200 µg

Clone: KH95

Isotype: Mouse IgG2b, κ

Immunogen: C57BL/10 mouse skin graft and splenocytes

Reactivity: Mouse

Preparation: The antibody was purified by affinity chromatography, and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Concentration: 0.2

C57BL/6 splenocytes stained with KH95 PE

Applications:

Applications: Flow Cytometry

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤1.0 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes: Additional reported applications (for the relevant formats) include: complement-dependent cytotoxicity¹, and Western blotting.

BALB/c splenocytes stained with KH95 PE

Description: The KH95 antibody reacts with the H-2Db MHC class I alloantigen expressed on nucleated cells from mice of the H-2Db haplotype. H-2Db is involved in antigen presentation to T cells expressing CD3/TCR and CD8 proteins. Reactivity with other haplotypes (*e.g.*, a,d,f,k,n,p,q,r,s,u,v) has not been reported.
