Product Data Sheet

PE anti-mouse CD150 (SLAM)

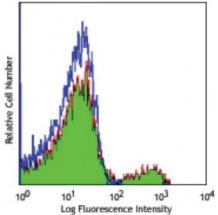

Catalog # / Size:	1179520 / 100 μg 1179515 / 25 μg
Clone:	TC15-12F12.2
Isotype:	Rat IgG2a, λ
Immunogen:	Mouse SLAM-human IgG1 fusion protein
Reactivity:	Mouse
Preparation:	The antibody was purified by affinity chromatography, and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and unconjugated antibody.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
Concentration:	0.2

C57BL/6 mouse splenocytes were stained with CD150 (clone TC15-12F12.2) PE (solid line) or rat IgG2a PE isotype control (broken line).

Applications:

Applications:	Flow Cytometry	t.
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.25 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.	Relative Cell Number
Application Notes:	The TC15-12F12.2 antibody has been reported to enhance the production of IFN- γ by Th1 cells stimulated through TCR. Additional reported applications (for the relevant formats) include: immunoprecipitaion1, enhancing IFN- γ production by Th1 cells when stimulated with CD31, and inhibiting CD3 induced T cell proliferation ⁶ . The LEAF TM purified antibody (Endotoxin <0.1 EU/µg, Azide- Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 115906).	C5 we TC or (oj lyr

C57BL/6 mouse bone marrow cells were stained with CD150 (clone TC15-12F12.2) PE (filled histogram) or rat IgG2a PE isotype control (open histogram) (gated on lymphoid cell population).

Description: CD150 is a 75-95 kD member of the immunoglobulin superfamily, also known as SLAM (signaling lymphocyte activation molecule) or IPO-3. CD150, a single chain type I transmembrane molecule, is expressed on thymocytes, T cell subsets, B cells, dendritic cells, and endothelial cells. The expression is upregulated upon activation. CD150 expression has been shown to be maintained on Th1 but not Th2 clones. T regulatory cells express a relatively high level of CD150. Antibodies against CD150 have been shown to augment IFN-γ production by Th1 cells, especially when co-stimulated through the TCR. CD150 associates with the src homology 2-domain-containing protein tyrosine phosphatase SHP-2, and this association is thought to be involved in signal transduction. In combination with CD48, CD150 is a useful marker for hematopoietic stem cell studies.
