## **Product Data Sheet**

## PE/Cy5 anti-mouse TER-119/Erythroid Cells

Catalog # / Size: 1181050 / 100 μg

1181045 / 25 μg

Clone: TER-119

Isotype: Rat IgG2b, κ

Immunogen: Day-14 fetal liver cells from a C57BL/6

mouse

Reactivity: Mouse

**Preparation:** The antibody was purified by affinity

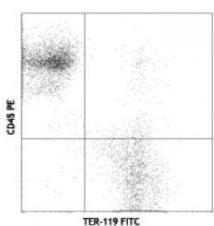

chromatography, and conjugated with PE/Cy5 under optimal conditions. The solution is free of unconjugated PE/Cy5

and unconjugated antibody.

**Formulation:** Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

**Concentration:** 0.2

C57BL/6 bone marrow cells stained with TER-119 FITC and CD45 PE

## **Applications:**

**Applications:** Flow Cytometry

Recommended

**Usage:** 

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of

this reagent is  $\leq 0.25$  microg per 106 cells in 100 microL volume. It is

recommended that the reagent be titrated for optimal performance for each

application.

**Application** 

Notes:

The TER-119 antibody is useful for distinguishing erythrocytes and cells in the erythroid lineage. Additional reported applications (for the relevant formats) include: immunoprecipitation1, Western blotting1, complement-mediated cytotoxicity3, and immunohistochemical staining of acetone-fixed frozen sections and formalin-fixed paraffin-embedded sections. LEAF™ purified antibody

(Endotoxin < 0.1 EU/ $\mu$ g, Azide-Free, 0.2  $\mu$ m filtered) is recommended for

functional assays (Cat. No. 116214).

**Description:** The TER-119 antigen is a 52 kD glycophorin A-associated protein, also known as

Ly-76. TER-119 is an erythroid-specific antigen expressed on early

proerythroblasts to mature erythrocytes, but not on erythroid colony-forming cells (BFU-E, blast-forming unit erythroid, or CFU-E, colony-forming unit erythroid).
