

APC/Cy7 anti-mouse TER-119/Erythroid Cells

Catalog # / Size: 1181115 / 25 µg
Clone: TER-119
Isotype: Rat IgG2b, κ
Immunogen: Day-14 fetal liver cells from a C57BL/6 mouse
Reactivity: Mouse
Preparation: The antibody was purified by affinity chromatography, and conjugated with APC/Cy7 under optimal conditions. The solution is free of unconjugated APC/Cy7 and unconjugated antibody.
Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
Concentration: 0.2

C57BL/6 bone marrow cells were stained with TER-119 APC/Cy7 (filled histogram) or rat IgG2b, κ APC/Cy7 isotype control (open histogram). Data shown was gated on total cell population.

Applications:

Applications: Flow Cytometry

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.25 microg per 10⁶ cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes: The TER-119 antibody is useful for distinguishing erythrocytes and cells in the erythroid lineage. Additional reported applications (for the relevant formats) include: immunoprecipitation¹, Western blotting¹, complement-mediated cytotoxicity³, and immunohistochemical staining of acetone-fixed frozen sections and formalin-fixed paraffin-embedded sections. LEAF™ purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 116214).

Description: The TER-119 antigen is a 52 kD glycophorin A-associated protein, also known as Ly-76. TER-119 is an erythroid-specific antigen expressed on early proerythroblasts to mature erythrocytes, but not on erythroid colony-forming cells (BFU-E, blast-forming unit erythroid, or CFU-E, colony-forming unit erythroid).
