

PE anti-mouse H-2Kb

Catalog # / Size: 1182535 / 50 µg
1182540 / 200 µg

Clone: AF6-88.5

Isotype: Mouse IgG2a, κ

Immunogen: C57BL mouse splenocytes

Reactivity: Mouse

Preparation: The antibody was purified by affinity chromatography, and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Concentration: 0.2

C57BL/6 mouse splenocytes stained with AF6-88.5 PE

Applications:

Applications: Flow Cytometry

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.25 microg per 10⁶ cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes: Additional reported applications (for the relevant formats) include: immunoprecipitation² and immunohistochemical staining of acetone-fixed frozen sections³. Clone AF6-88.5 is not suitable for immunohistochemical staining of formalin-fixed paraffin embedded sections.

Description: The AF6-88.5 antibody reacts with H-2Kb MHC class I alloantigen expressed on nucleated cells from mice of the H-2Kb haplotype. H-2Kb is involved in antigen presentation to T cells expressing CD3/TCR and CD8 proteins. The AF6-88.5 antibody does not cross-react with other haplotypes (d, f, j, k, p, q, r, s, u, v).
