Product Data Sheet

PE/Cy7 anti-mouse H-2Kd

Catalog # / Size: 1183110 / 100 μg

1183105 / 25 µg

Clone: SF1-1.1

Isotype: Mouse IgG2a, κ

Immunogen: BALB/c Mouse cells

Reactivity: Mouse

Preparation: The antibody was purified by affinity

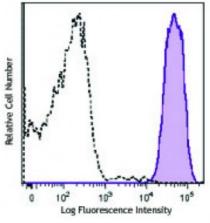

chromatography and conjugated with PE/Cy7 under optimal conditions. The solution is free of unconjugated PE/Cy7

and unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2

BALB/c splenocytes were stained with H-2Kd (clone SF1-1.1) PE/Cy7 (filled histogram) or mouse IgG2a, κ PE/Cy7 isotype control (open

histogram).

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is \leq 0.25 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each

application.

Application

Notes:

The SF1-1.1 antibody is weakly cross-reactive with H-2 κ but does not cross-react with other haplotypes (b, j, p, q, s, v). Clone SF1-1.1 recognizes the α 3 domain of

Kd.

Additional reported applications (for the relevant formats) include:

immunoprecipitation^{1,4} and Western blotting2.

Description: The SF1-1.1 antibody reacts with the H-2Kd MHC class I alloantigens expressed on

nucleated cells from mice of the H-2Kd haplotype. H-2Kd is involved in antigen

presentation to T cells expressing CD3/TCR and CD8 proteins.
