

Purified anti-mouse CD11c

Catalog # / Size: 1186505 / 50 µg
1186510 / 500 µg

Clone: N418

Isotype: Hamster IgG

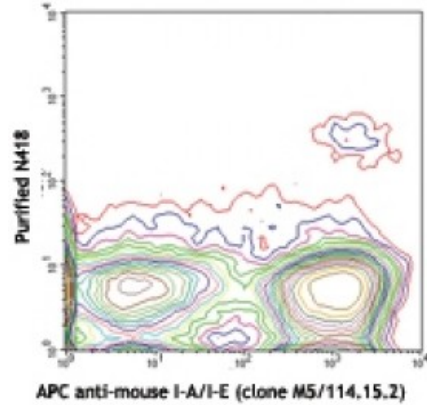

Immunogen: Mouse spleen dendritic cells

Reactivity: Mouse

Preparation: The antibody was purified by affinity chromatography.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Concentration: 0.5

Applications:

Applications: Other

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤1.0 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes: Additional reported applications (for the relevant formats) include: immunoprecipitation³, immunohistochemical staining of acetone-fixed frozen sections³, and immunofluorescence microscopy^{5, 9} (Alexa Fluor® 488 conjugated N418 was used for IHC in frozen sections¹⁰).

C57BL/6 mouse splenocytes stained with APC anti-mouse I-A/I-E (clone M5/114.15.2) and purified N418 (top) or purified Armenian hamster IgG isotype control (bottom), followed by anti-Armenian hamster IgG FITC

Description: CD11c is a 150 kD glycoprotein also known as α_X integrin, CR4, and p150. CD11c forms a $\alpha_X\beta_2$ heterodimer with β_2 integrin (CD18). It is primarily expressed on dendritic cells, NK cells, a subset of intestinal intraepithelial lymphocytes (IEL), and some activated T cells. The $\alpha_X\beta_2$ integrin plays an important role in cell-cell contact by binding its ligands: iC3b, fibrinogen, and CD54.
