## **Product Data Sheet**

## Biotin anti-mouse CD134 (OX-40)

Catalog # / Size:	1197015 / 50 μg
Clone:	OX-86
Isotype:	Rat IgG1, к
Immunogen:	Recombinant mouse OX-40-CD4 chimeric protein
<b>Reactivity:</b>	Mouse
Preparation:	The antibody was purified by affinity chromatography, and conjugated with biotin under optimal conditions. The solution is free of unconjugated biotin.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
<b>Concentration</b> :	0.5

Con A-stimulated C57BL/6 mouse splenocytes stained with biotinylated OX-86, followed by Sav-PE

## **Applications:**

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is $\leq 1.0$ microg per $10^6$ cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.
Application Notes:	Clone OX-86 has been reported to act as an agonist and stimulate OX-40.

Description:	CD134 is a type I integral membrane protein also known as OX-40, ACT35, and

**Description:** CD134 is a type l integral membrane protein also known as OX-40, AC135, and tumor necrosis factor receptor superfamily member 4 (TNFRSF4). This receptor is expressed on activated CD4<sup>+</sup> and CD8<sup>+</sup> T cells and B cells. The OX-40 receptor binds to the OX-40 ligand (CD252) to provide a costimulatory signal that is independent of CD28. Blockade of OX40-OX40 ligand interactions has been shown to ameliorate experimental EAE and inflammatory bowel disease, which implies that these interactions are important in the pathogenesis of some autoimmune diseases.
