## **Product Data Sheet**

## PE anti-mouse CD127 (IL-7Rα)

 $\textbf{Catalog \# /} \quad 1205555 \, / \, 50 \; \mu g$ 

**Size:** 1205560 / 200 μg

Clone: SB/199

**Isotype:** Rat IgG2b, κ

Immunogen: mouse pre-B cell line 1A9

Reactivity: Mouse

**Preparation:** The antibody was purified by affinity

chromatography, and conjugated with

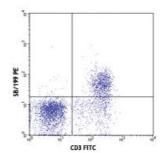

PE under optimal conditions.

**Formulation:** Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Workshop Number: 750 under optimal conditions.

Concentration: 0.2

C57BL/6 mouse splenocytes stained with CD3 FITC and SB/199

PE

## **Applications:**

**Applications:** Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is  $\leq 1.0$  µg per million cells in 100 µl volume. It is recommended that the reagent be titrated for optimal performance for

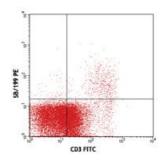

each application.

Additional reported applications (for the relevant formats) include: To reduce non-specific binding to cells bearing Fc-receptors, pre-incubation of cells with anti-mouse CD16/CD32,

clone 93 (Cat. No. 101301/101302), is

recommended prior to immunofluorescent staining.

**Description:** 

CD127 is a 60-90 kD type I transmembrane glycoprotein, also known as IL-7 receptor  $\alpha$  chain or IL-7R $\alpha$ . It forms heterodimer with the common  $\gamma$  chain ( $\gamma$ c or CD132) which is shared with the receptors for IL-2, IL-4, IL-9, IL-13, IL-15, and IL-21. CD127 is expressed on immature B cells through early pre-B stage, thymocytes (except CD4/CD8 double positive thymocytes), peripheral T cells, and bone marrow stromal cells. CD127 has been reported to be an useful marker for identifying memory and effector T cells. The ligation of IL-7 with its receptor is important for stimulation of mature and immature T cells as well as immature B cells proliferation and development.
