APC/Cy7 anti-mouse CD43 Activation-Associated Glycoform

Catalog # / Size: 1206100 / 100 µg

1206095 / 25 µg

Clone:

Isotype: Rat IgG2a, ĸ

Mouse WEHI 274.3 myeloid tumor cells Immunogen:

Reactivity: Mouse

Preparation: The antibody was purified by affinity

> chromatography, and conjugated with APC/Cy7 under optimal conditions. The

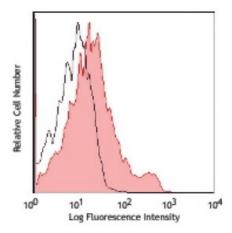

solution is free of unconjugated

APC/Cy7.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2

C57BL/6 mouse splenocytes stained

with 1B11 APC/Cy7

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤0.25 microg per million cells in 100 microL volume. It is

recommended that the reagent be titrated for optimal performance for each

application.

Application Notes:

Additional reported applications (for the relevant formats) include:

immunoprecipitation^{1,2}, Western blotting^{1,2}, and immunohistochemistry of

acetone-fixed frozen sections.

Description:

CD43, also known as Ly-48, Leukosialin, Sialophorin, Leukocyte Sialoglycoprotein, and gp115, is a large single chain of type I transmembrane glycoprotein with abundant O-glycosylation and sialylation sites. Due to variable glycosylation and sialylation, two isoforms of CD43 have been identified. The 115 kD glycoform of CD43 is expressed on most hematopietic cells including T lymphocytes, NK cells, monocytes, granulocytes, platelets, and CD5⁺ B cells. It is not present on resting B cells and erythrocytes. While the 130 kD glycoform is thought to be activationassociated form primarily expressed on myeloid cells, pre-B cells, and activated T cells. It has been reported that CD43 binds to CD54 and Siglec-1. CD43 plays dual roles in cell adhesion and anti-adhesion, as well as costimulation of T cell activation and survival, and induction of apoptosis of T cells and hematopoietic progenitors. The 1B11 antibody reacts with the activation-associated glycoform of CD43. The epitope recognized by 1B11 is also shared with desialylated CD45RB. This antibody is useful for differentiation of effector CD8 T cells and memory T cells.
