## PerCP/Cy5.5 anti-mouse CD43 Activation-Associated Glycoform

**Catalog # / Size:** 1206115 / 25 μg

1206120 / 100 µg

Clone: 1B11

**Isotype:** Rat IgG2a, κ

Immunogen: Mouse WEHI 274.3 myeloid tumor cells

Reactivity: Mouse

**Preparation:** The antibody was purified by affinity

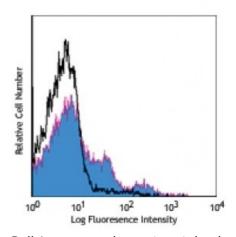

chromatography, and conjugated with PerCP/Cy5.5 under optimal conditions. The solution is free of unconjugated PerCP/Cy5.5 and unconjugated

antibody.

**Formulation:** Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2

Balb/c mouse splenocytes stained

with 1B11 PerCP/Cy5.5

## **Applications:**

**Applications:** Flow Cytometry

Recommended

**Usage:** 

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is  $\leq 1.0$  microg per  $10^6$  cells in 100 microL. It is recommended that the reagent be titrated for optimal performance for each application.

\* PerCP/Cy5.5 has a maximum absorption of 482 nm and a maximum emission of

690 nm.

**Application** 

Notes:

Additional reported applications (for the relevant formats) include:

immunoprecipitation<sup>1,2</sup>, Western blotting<sup>1,2</sup>, and immunohistochemistry of

acetone-fixed frozen sections.

**Description:** 

CD43, also known as Ly-48, Leukosialin, Sialophorin, Leukocyte Sialoglycoprotein, and gp115, is a large single chain of type I transmembrane glycoprotein with abundant O-glycosylation and sialylation sites. Due to variable glycosylation and sialylation, two isoforms of CD43 have been identified. The 115 kD glycoform of CD43 is expressed on most hematopietic cells including T lymphocytes, NK cells, monocytes, granulocytes, platelets, and CD5<sup>+</sup> B cells. It is not present on resting B cells and erythrocytes. While the 130 kD glycoform is thought to be activation-associated form primarily expressed on myeloid cells, pre-B cells, and activated T cells. It has been reported that CD43 binds to CD54 and Siglec-1. CD43 plays dual roles in cell adhesion and anti-adhesion, as well as costimulation of T cell

activation and survival, and induction of apoptosis of T cells and hematopoietic progenitors. The 1B11 antibody reacts with the activation-associated glycoform of CD43. The epitope recognized by 1B11 is also shared with desialylated CD45RB. This antibody is useful for differentiation of effector CD8 T cells and memory T cells.
