Product Data Sheet

Pacific Blue™ anti-mouse CD103

Catalog # / Size: 1207090 / 100 µg

1207085 / 25 μg

Clone:

Isotype: Hamster IgG

Mouse intestinal intraepithelial Immunogen:

lymphocytes

Reactivity: Mouse

The antibody was purified by affinity **Preparation:**

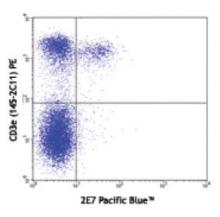

> chromatography, and conjugated with Pacific Blue[™] under optimal conditions. The solution is free of unconjugated

Pacific Blue™.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.5

C57BL/6 splenocytes stained with 2E7 Pacific Blue™ and CD3e (145-2C11) PE

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 1.0 microg per 10⁶ cells in 100 microL volume or 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for

each application.

* Pacific Blue™ has a maximum emission of 455 nm when it is excited at 405 nm. Prior to using Pacific Blue™ conjugate for flow cytometric analysis, please verify your flow cytometer's capability of exciting and detecting the

fluorochrome.

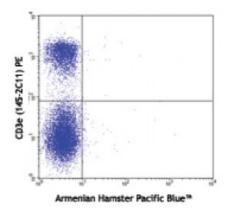

Additional reported applications (for the relevant formats) include:

immunoprecipitation1,

immunohistochemical staining^{1,7} of acetone-fixed frozen sections. immunofluorescence2, and in vitro

activation1.

C57BL/6 splenocytes stained with Armenian Hamster isotype control Pacific Blue™ and CD3e (145-2C11)

Description:

CD103 is a type I transmembrane glycoprotein known as αE integrin or Integrin α_{IEL} chain. It belongs to the integrin family and is primarily found on intestinal intraepithelial lymphocytes (IEL). CD103 is also expressed on a subpopulation of lamina propria T cells, epithelial dendritic cells, lamina propria-derived dendritic cells, and a small subset of peripheral lymphocytes. T regulatory cells express high level of CD103. The CD103 expression on lymphocytes can be induced upon activation and TGF- β stimulation. In association with integrin β_7 , CD103 is expressed as $\alpha E/\beta_7$ heterodimer. Mature CD103 protein can be cleaved into 2 chains, a 150 kD (C-terminal) chain and a 25 kD (N-terminal) chain, which remain linked by disulfide bonds. CD103 binds to E-cadherin and mediates homing of lymphocytes to the intestinal epithelium.
