

Purified anti-mouse Ly-6A/E (Sca-1)

Catalog # / Size: 1212510 / 500 µg
 1212505 / 50 µg

Clone: E13-161.7

Isotype: Rat IgG2a, κ

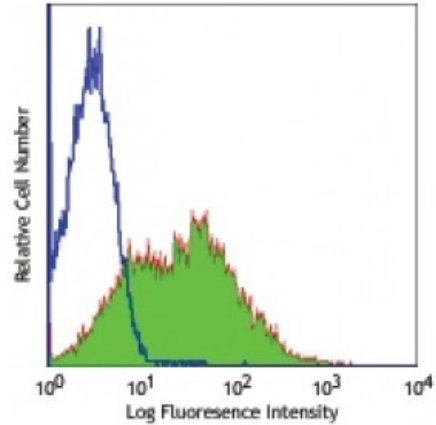

Immunogen: mouse pre-T cells

Reactivity: Mouse

Preparation: The antibody was purified by affinity chromatography.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Concentration: 0.5

C57BL/6 mouse splenocytes stained with purified E13-161.7, followed by anti-rat IgG FITC

Applications:

Applications: Other

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.25 microg per 10⁶ cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes: Additional reported applications (for the relevant formats) include: complement-mediated cytotoxicity¹, immunohistochemical staining of frozen sections² and Bouin-fixed, paraffin-embedded samples⁴, immunofluorescence microscopy⁴, and immunoprecipitation³.

The two Sca-1 recognizing clones [D7](#) and E13-161.7 have been shown to bind distinct epitopes due to the inability of D7 to block the binding of E13-161.7.⁷

Description: Ly-6A/E is an 18 kD member of the Ly-6 multigene family also known as Sca-1. Ly6A/E is a glycosylphosphatidylinositol (GPI)-linked protein expressed on hematopoietic stem cells. In mice expressing the Ly-6.2 haplotype (e.g., AKR, C57BL, C57BR, DBA/2, SJL, SWR, and 129), Ly-6A/E is also expressed on peripheral B lymphocytes and thymic and peripheral T lymphocytes. Strains expressing the Ly-6.1 haplotype (e.g., BALB/c, CBA, C3H/He, DBA/1, and NZB)

have low Ly-6A/E expression on resting peripheral lymphocytes. The expression of Ly-6A/E on lymphocytes is upregulated upon activation from both Ly6.1 and Ly6.2 haplotype mice. Ly-6A/E is thought to be involved in the regulation of both T and B cell responses. The E13-161.7 antibody has been reported to be useful for immunohistochemical staining of frozen sections, immunoprecipitation, flow cytometry, and complement-mediated cytotoxicity.
