

**Biotin anti-mouse Ly-6A/E (Sca-1)**

**Catalog # / Size:** 1212520 / 500 µg  
**Clone:** E13-161.7  
**Isotype:** Rat IgG2a, κ  
**Immunogen:** mouse pre-T cells  
**Reactivity:** Mouse  
**Preparation:** The antibody was purified by affinity chromatography, and conjugated with biotin under optimal conditions. The solution is free of unconjugated biotin.  
**Formulation:** Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.  
**Concentration:** 0.5

C57BL/6 mouse splenocytes stained with biotinylated E13-161.7, followed by Sav-PE

**Applications:**

**Applications:** Immunofluorescence  
**Recommended Usage:** Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤0.25 microg per 10<sup>6</sup> cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.  
**Application Notes:** Additional reported applications (for the relevant formats) include: complement-mediated cytotoxicity<sup>1</sup>, immunohistochemical staining of frozen sections<sup>2</sup> and Bouin-fixed, paraffin-embedded samples<sup>4</sup>, immunofluorescence microscopy<sup>4</sup>, and immunoprecipitation<sup>3</sup>.

The two Sca-1 recognizing clones [D7](#) and E13-161.7 have been shown to bind distinct epitopes due to the inability of D7 to block the binding of E13-161.7.<sup>7</sup>

**Description:** Ly-6A/E is an 18 kD member of the Ly-6 multigene family also known as Sca-1. Ly6A/E is a glycosylphosphatidylinositol (GPI)-linked protein expressed on hematopoietic stem cells. In mice expressing the Ly-6.2 haplotype (e.g., AKR, C57BL, C57BR, DBA/2, SJL, SWR, and 129), Ly-6A/E is also expressed on peripheral B lymphocytes and thymic and peripheral T lymphocytes. Strains expressing the Ly-6.1 haplotype (e.g., BALB/c, CBA, C3H/He, DBA/1, and NZB) have low Ly-6A/E expression on resting peripheral lymphocytes. The expression of Ly-6A/E on lymphocytes is upregulated upon activation from both Ly6.1 and Ly6.2

haplotype mice. Ly-6A/E is thought to be involved in the regulation of both T and B cell responses. The E13-161.7 antibody has been reported to be useful for immunohistochemical staining of frozen sections, immunoprecipitation, flow cytometry, and complement-mediated cytotoxicity.
