## **Product Data Sheet**

## PE/Cy7 anti-mouse CD357 (GITR)

Catalog # / Size:	1231585 / 25 μg 1231590 / 100 μg
Clone:	DTA-1
Isotype:	Rat IgG2b, λ
Immunogen:	Mouse CD25+ CD4+ T cells
<b>Reactivity:</b>	Mouse
Preparation:	The antibody was purified by affinity chromatography and conjugated with PE/Cy7 under optimal conditions. The solution is free of unconjugated PE/Cy7 and unconjugated antibody.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
<b>Concentration:</b>	0.2

C57BL/6 mouse splenocytes were stained with CD357 (clone DTA-1) PE/Cy7 (filled histogram) or rat IgG2b PE/Cy7 isotype control (open histogram).

## **Applications:**

Applications:Flow CytometryRecommended<br/>Usage:Each lot of this antibody is quality control tested by immunofluorescent staining<br/>with flow cytometric analysis. For flow cytometric staining, the suggested use of<br/>this reagent is ≤0.25 microg per million cells in 100 microL volume. It is<br/>recommended that the reagent be titrated for optimal performance for each<br/>application.

Application	1. De Luca A, <i>et al.</i> 2007. <i>J. Immunol.</i> 179:5999.	PubMed

**Description:** GITR (glucocorticoid-induced TNFR-related gene) is a member of the TNF receptor superfamily, also known as TNFRSF18 and AITR (in humans). It is expressed at low levels on resting T lymphocytes and at high levels on CD25<sup>+</sup> CD4<sup>+</sup> Tregs. The expression of GITR on T cells can be upregulated upon activation. Interaction of GITR with its ligand (GITRL) has been demonstrated to augment T cell activation, proliferation, cytokine production as well as MAPKs and NF-κB activation, and abrogate the inhibitory function of CD25<sup>+</sup> CD4<sup>+</sup> Tregs. *In vivo* activation of GITR causes development of autoimmune diseases and restores the suppressed immune response.
