## **Product Data Sheet**

## PE/Cy7 anti-mouse Ly-6G

Catalog # / Size:	1238085 / 25 μg 1238090 / 100 μg
Clone:	1A8
Isotype:	Rat IgG2a, к
Immunogen:	Ly-6G transfected EL-4J cell line.
<b>Reactivity:</b>	Mouse
Preparation:	The antibody was purified by affinity chromatography, and conjugated with PE/Cy7 under optimal conditions. The solution is free of unconjugated PE/Cy7 and unconjugated antibody.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
<b>Concentration:</b>	0.2

## **Applications:**

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is $\leq 0.25$ microg per $10^6$ cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.
Application Notes:	While 1A8 recognizes only Ly-6G, clone RB6-8C5 recognizes both Ly-6G and Ly- 6C. Clone RB6-8C5 binds with high affinity to mouse Ly-6G molecules and to a lower extent to Ly-6C <sup>15</sup> . Clone RB6-8C5 impairs the binding of anti-mouse Ly-6G clone 1A8 <sup>15</sup> . However, clone RB6-8C5 is able to stain in the presence of anti- mouse Ly-6C clone HK1.4 <sup>16</sup> .
	Additional reported applications (for the relevant formats) include: immunohistochemistry <sup>9</sup> of frozen sections <sup>10</sup> and paraffin-embedded sections <sup>11</sup> , and depletion <sup>4, 12-14</sup> . The LEAF <sup><math>TM</math></sup> purified antibody (Endotoxin <0.1 EU/µg, Azide- Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 127620). For <i>in vivo</i> studies or highly sensitive assays, we recommend Ultra-LEAF <sup><math>TM</math></sup> purified antibody (Cat. No. 127632) with a lower endotoxin limit than standard LEAF <sup><math>TM</math></sup> purified antibodies (Endotoxin <0.01 EU/microg).
