## **Product Data Sheet**

## Pacific Blue<sup>™</sup> anti-mouse TCR Vα2

Catalog # / Size:	1239080 / 100 μg 1239075 / 25 μg
Clone:	B20.1
Isotype:	Rat IgG2a, λ
Immunogen:	Soluble TCR from mouse CTL clone KB5- C20
<b>Reactivity:</b>	Mouse
Preparation:	The antibody was purified by affinity chromatography, and conjugated with Pacific Blue <sup>™</sup> under optimal conditions. The solution is free of unconjugated Pacific Blue <sup>™</sup> .
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Flow Cytometry

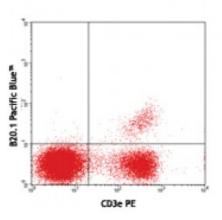

Each lot of this antibody is quality

For flow cytometric staining, the suggested use of this reagent is  $\leq 0.06$ 

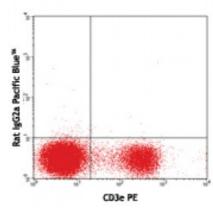

control tested by immunofluorescent

staining with flow cytometric analysis.

microg per million cells in 100 microL

C57BL/6 mouse splenocytes stained with B20.1 Pacific Blue<sup>™</sup> and CD3e PE

	volume or 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.	CD3e PE
	* Pacific Blue <sup>™</sup> has a maximum emission of 455 nm when it is excited at 405 nm. Prior to using Pacific Blue <sup>™</sup> conjugate for flow cytometric analysis, please verify your flow cytometer's capability of exciting and detecting the fluorochrome.	C57BL/6 mouse splenocytes stained with rat IgG2a, λ Pacific Blue™ isotype control and CD3e PE
Application Notes:	The B20.1 antibody recognizes most members of the V $\alpha$ 2 TCR subfamily in mice having the a, b, and c haplotypes.

Description	The TCB $\alpha$ ( $\alpha$ ) chain complexes with the T	CB B (B) chain to form the T cell

**Description:** The TCR  $\alpha$  ( $\alpha$ ) chain complexes with the TCR  $\beta$  ( $\beta$ ) chain to form the T cell receptor in 95% of T cells, whereas the remaining 5% of T cells express gamma and delta chains ( $\gamma/\delta$ ). TCR V $\alpha$ 2 is a distinct TCR subfamily found in mice having the a, b, and c haplotypes.
