Product Data Sheet

Purified anti-mouse Ly-6C

Catalog # / Size: 1240010 / 500 μg

1240005 / 50 μg

Clone: HK1.4

Isotype: Rat IgG2c, k

Immunogen: L3 cloned CTL cells

Reactivity: Mouse

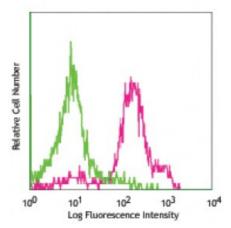

Preparation: The antibody was purified by affinity

chromatography.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.5

C57BL/6 mouse bone marrow cells stained with purified HK1.4, followed by anti-rat IgG PE (gated on myeloid cell population)

Applications:

Applications: Flow Cytometry, Immunohistochemistry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.25 microg per 10^6 cells in 100 microL volume or 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes:

Clone HK1.4 does not block the binding of clone RB6-8C5⁸.

Additional reported applications (for relevant formats of this clone) include: *in vitro* activation of T cells¹⁻³ and immunohistochemistry of frozen sections4.

Description: Most hematopoietic cells express one or more members of Ly-6 family. The

expression of Ly-6 varies with development stage and activation. Ly-6C is a 14-17 kD GPI-linked surface protein expressed on mouse monocyte/macrophage cells, endothelial cells, neutrophils, and some T cell subsets. Ly-6C is reported to be an

indicator of memory CD8⁺ T cells.
