Product Data Sheet

Purified anti-mouse CD41

Catalog # / Size:	1269505 / 50 μg 1269510 / 500 μg
Clone:	MWReg30
Isotype:	Rat IgG1, к
Immunogen:	Mouse platelets
Reactivity:	Mouse
Preparation:	The antibody was purified by affinity chromatography.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
Concentration:	0.5

C57 BL/6 platelets were stained with CD41 (clone:MWReg30) (filled histogram) or rat IgG1, κ isotype control (open histogram), followed by anti-rat IgG FITC.

Applications:

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.25 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.
Application Notes:	Additional reported applications (for the relevant formats) include: depletion of platelets and functional assay <i>in vivo</i> . ^{4,7} The LEAF ^{m} purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for <i>in vivo</i> studies (Cat. No. 133910).

Description:	CD41, also known as integrin α 2b and GPIIb, is a transmembrane glycoprotein that is expressed by platelets and megakaryocytes. It was reported that CD41 is also expressed on hematopoietic progenitors. CD41 associates with CD61 (integrin β 3) to form complexes that interact with fibrinogen, fibronectin, von Willebrand factor, and thrombin. CD41 is required for platelet adhesion and aggregation. Defect of CD41 leads to disorders of coagulation.
