## **Product Data Sheet**

## PE anti-mouse CD117 (c-kit)

| Catalog # / Size:     | 1275530 / 200 μg<br>1275525 / 50 μg   |
|-----------------------|---|
| Clone:                | ACK2  |
| Isotype:              | Rat IgG2b, к  |
| Immunogen:            | Murine IL-3 dependent mast cells  |
| Reactivity:           | Mouse   |
| Preparation:          | The antibody was purified by affinity<br>chromatography, and conjugated with<br>PE under optimal conditions. The<br>solution is free of unconjugated PE and<br>unconjugated antibody. |
| Formulation:          | Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.   |
| <b>Concentration:</b> | 0.2   |

C57BL/6 mouse bone marrow cells stained with ACK2 PE and CD11b (M1/70) FITC

## **Applications:**

| Applications:              | Flow Cytometry   |
|----------------------------|--|
| Recommended<br>Usage:      | Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is $\leq 0.06$ microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.  |
| Application<br>Notes:      | Injection of ACK2 in mice of NOD genetic background is not recommended as mice develop immediate anaphylaxis, resulting in animal death. Treatment is possible with co-injection of Benadryl.3   |
|                            | ACK2 has been reported to block c-Kit function. The LEAF <sup>™</sup> purified antibody<br>(Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for<br>functional assays (Cat. No. 135103). For highly sensitive assays, we recommend<br>Ultra-LEAF <sup>™</sup> purified antibody (Cat. No. 135114) with a lower endotoxin limit than<br>standard LEAF <sup>™</sup> purified antibodies (Endotoxin <0.01 EU/microg).  |

| Description:               | CD117 is a 145 kD immunoglobulin superfamily member, also known as c-Kit and<br>stem cell factor receptor (SCFR). It is a transmembrane tyrosine-kinase receptor<br>that binds the c-Kit ligand (also known as steel factor, stem cell factor, and mast<br>cell growth factor). CD117 is expressed on hematopoietic stem cells (including<br>multipotent hematopoietic stem cells, progenitors committed to myeloid and/or<br>erythroid lineages, and T and B cell precursors), mast cells, and acute myeloid<br>leukemia (AML) cells. CD117 interaction with its ligand is critical for the<br>development of hematopoietic stem cells. |
