Product Data Sheet

FITC anti-mouse CD335 (NKp46)

Catalog # / Size: 1288025 / 25 µg
1288030 / 100 µg

Clone: 29A1.4

Isotype: Rat IgG2a, κ

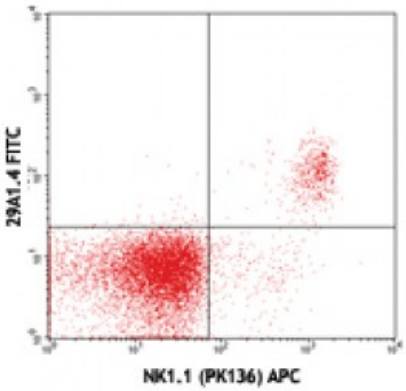
Immunogen: NKP46-IgG1 Fc fusion protein

Reactivity: Mouse

Preparation: The antibody was purified by affinity chromatography, and conjugated with FITC under optimal conditions. The solution is free of unconjugated FITC.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Concentration: 0.5



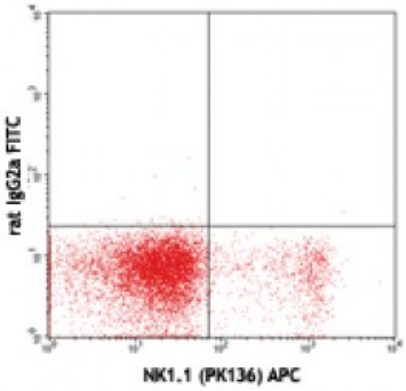
C57BL/6 splenocytes stained with NK1.1 (PK136) APC and 29A1.4 FITC

Applications:

Applications: Flow Cytometry

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤1.0 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes: Additional reported applications (for the relevant formats) include: immunohistochemical staining of frozen tissue sections[1,2] and *in vitro* activation of NK cells1.



C57BL/6 splenocytes stained with NK1.1 (PK136) APC and rat IgG2a, κ FITC isotype control

Description: CD335, also known as NKp46, is a single-pass type I membrane protein of 46 kD. It belongs to the natural cytotoxicity receptor (NCR) family and contains two Ig-like (immunoglobulin-like) domains. It's expression is restricted to NK cells and a subset of NKT cells; it's not expressed in CD1d-restricted NKT cells. CD335 is a receptor for viral hemagglutinins and heparan sulfate proteoglycans and is involved in NK cell activation.
