Product Data Sheet

PE/Cy7 anti-mouse CD26 (DPP-4)

Catalog # / Size: 1289050 / 100 µg
1289045 / 25 µg

Clone: H194-112

Isotype: Rat IgG2a, κ

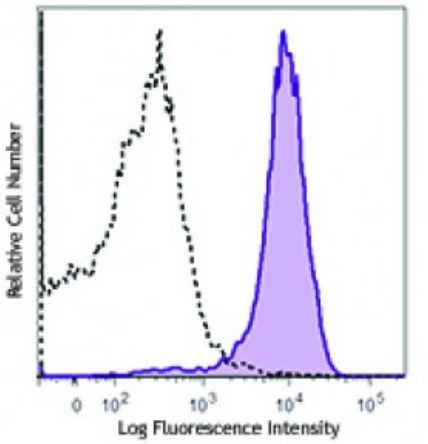
Immunogen: BALB/c thymocytes

Reactivity: Mouse

Preparation: The antibody was purified by affinity chromatography and conjugated with PE/Cy7 under optimal conditions. The solution is free of unconjugated PE/Cy7 and unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Concentration: 0.2



C57BL/6 splenocytes were stained with CD26 (clone H194-112) PE/Cy7 (filled histogram) or rat IgG2a, κ PE/Cy7 (open histogram).

Applications:

Applications: Flow Cytometry

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤1.0 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes: Additional reported applications include: *in vitro* activation of thymocytes1, immunoprecipitation from cell lysates and cell-free supernatants[1,2] and immunohistochemical staining of frozen tissue sections1.

Description: CD26, also known as DPP IV or THAM, is a 220 kD type II transmembrane homodimer. It consists of an α/β hydrolase domain and an eight-blade β-propeller domain. After proteolysis of the membrane-bound CD26, a soluble form of DPP IV is released. CD26 is expressed on thymocytes (development dependent), T cells, B cells, NK cells, and macrophages. It is involved in T cell costimulation, endothelial cell migration and proteolysis processes.
