

**APC anti-mouse CD144 (VE-cadherin)**

**Catalog # / Size:** 1290055 / 25 µg  
1290060 / 100 µg

**Clone:** BV13

**Isotype:** Rat IgG1, κ

**Immunogen:** VE-cadherin-Ig fusion protein

**Reactivity:** Mouse

**Preparation:** The antibody was purified by affinity chromatography and conjugated with APC under optimal conditions. The solution is free of unconjugated APC and unconjugated antibody.

**Formulation:** Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

**Concentration:** 0.2

bEnd.3 cells surface stained with CD144 (clone BV13) APC (filled histogram) or rat IgG1 APC isotype control (open histogram).

**Applications:**

**Applications:** Flow Cytometry

**Recommended Usage:** Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤0.06 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.

**Application Notes:** Clone BV13 recognizes an epitope between aa 45 and 56, and has a binding affinity of 5-15 nM.5 Additional reported applications (for relevant formats) include: Western blotting1, blocking of cell interactions *in vivo*1, and immunofluorescence microscopy4.

**Description:** CD144, also known as vascular endothelial-cadherin (VE-cadherin), is a 120 kD member of the type II Cadherin family. It is an endothelial specific hemophilic adhesion molecule involved in endothelial cell survival, migration, contact-dependent growth inhibition, and homophilic adhesion. VE-cadherin is essential for maintaining the integrity of the endothelial barrier *in vivo*.
