Product Data Sheet

APC anti-mouse TIGIT (Vstm3)

Catalog # / Size:	1310530 / 100 μg 1310525 / 25 μg
Clone:	1G9
Isotype:	Mouse IgG1, κ
Reactivity:	Mouse
Preparation:	The antibody was purified by affinity chromatography and conjugated with APC under optimal conditions. The solution is free of unconjugated APC and unconjugated antibody.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
Concentration:	0.2

Con A-stimulated C57BL/6 mouse splenocytes (3 days) were stained with CD3 PE and TIGIT (clone 1G9) APC (top) or mouse IgG1, κ APC isotype control (bottom).

Applications:

Applications:	Flow Cytometry	ų	103				
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 1.0 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.	Mouse IgG1, K A	10 ² 10 ¹ 10 ⁰	 o ¹	10 ² 1 D3 PE	03	104

Description	T coll immunorecenter with la and ITIM dome	ain	c (T				cot

Description: T cell immunoreceptor with Ig and ITIM domains (TIGIT), also known as V-set and transmembrane domain-containing protein 3 (Vstm3), is a 26 kD, type I transmembrane protein and member of the CD28 family. TIGIT is expressed on activated T cells, follicular T helper, memory, and regulatory T cells as well as on NK cells. Its binding partners include CD155 (PVR) and CD112 (PVRL2). TIGIT is a negative regulator of NK and T cell activation. Engagement of TIGIT by dendritic cells results in their differentiation into a tolerogenic phenotype, with an increased secretion of IL-10 and a diminished production of IL-12. Mice deficient for TIGIT are more susceptible to autoimmune disease.
