APC anti-mouse CD49a

Catalog # / Size: $1313025 / 25 \mu g$

 $1313030 / 100 \mu g$

Clone: $HM\alpha$

Isotype: Hamster IgG

Immunogen: Mouse Neuroblastoma Cell Line C1300

Reactivity: Mouse

Preparation: The antibody was purified by affinity

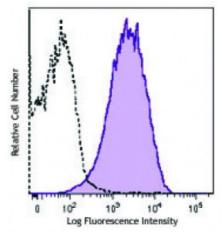

chromatography and conjugated with APC under optimal conditions. The solution is free of unconjugated APC and

unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2

C1300 (mouse neuroblastoma cell line) cells were stained with CD49a (clone HM α 1) APC (filled histogram) or Armenian hamster IgG APC isotype control (open histogram).

Applications:

Applications: Flow Cytometry

Recommended Ea

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of

this reagent is ≤0.5 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each

application.

Application Notes:

Additional reported applications (for the relevant format) include: inhibition of cell

adhesion and cytokine production^{1,2}.

Application

Description: CD49a is a 1179 aa, type I transmembrane glycoprotein also known as $\alpha 1$

integrin, VLA-1 α chain, or integrin $\alpha 1.$ It associates antibody v042010 with CD29 ($\beta 1$ integrin) to form the VLA-1 complex, a collagen IV and alminin-1 receptor that is expressed on activated T cells, smooth muscle cells, endothelial cells, neuronal cells, fibroblasts, and mesenchymal cells. CD49a is an adhesion molecule and is involved in the regulation of leukocyte migration, T cell proliferation, and cytokine

production.
