Product Data Sheet

PE anti-mouse CD160

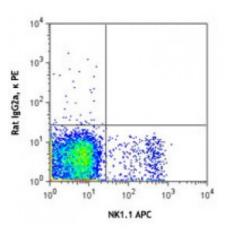

Catalog # / Size:	1315020 / 100 μg 1315015 / 25 μg
Clone:	7H1
Isotype:	Rat IgG2a, к
Immunogen:	Soluble His-Tag mouse CD160
Reactivity:	Mouse
Preparation:	The antibody was purified by affinity chromatography and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and unconjugated antibody.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
Concentration:	0.2

C57BL/6 mouse splenocytes were stained with NK1.1 APC and CD160 (clone 7H1) PE (top) or rat IgG2a, κ PE isotype control (bottom).

Applications:

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 1.0 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.

Application	1. Tsujimura K, <i>et al.</i> 2006. <i>Immunol. Lett.</i> 106:48. (FC)
References:	

Description:	CD160, also known as BY55, is a 27 kD glycoprotein and member of the Ig superfamily. It is anchored to the cell membrane through glycosylphosphatidylinositol (GPI) and forms disulfide-linked multimers. A soluble form of CD160 is secreted by activated CD8 ⁺ T cells. Expressed by NK, NKT, γ/δ T cells, intestinal intraepithelial T cells and a subset of memory CD8 ⁺ T cells, CD160 binds both classical and non-classical MHC class I molecules. It is also a ligand for HVEM. CD160 enhances proliferation of activated CD8 ⁺ T cells and triggers cell cytotoxicity in NK cells.
