## **Product Data Sheet**

## Alexa Fluor<sup>®</sup> 647 anti-mouse IL-17RB

Catalog # / Size:	1331520 / 100 μg 1331515 / 25 μg
Clone:	9B10
Isotype:	Rat IgG2a, к
Immunogen:	Recombinant mouse IL-17RB - Fc chimera (human IgG1)
<b>Reactivity:</b>	Mouse
Preparation:	The antibody was purified by affinity chromatography and conjugated with Alexa Fluor® 647 under optimal conditions.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
<b>Concentration</b> :	0.5

Mouse IL-17RB transfected 300.19 cells were stained with IL-17RB (clone 9B10) Alexa Fluor® 647 (filled histogram) or rat IgG2a, κ Alexa Fluor® 647 (open histogram).

## **Applications:**

Applications: Flow Cytometry

Recommended<br/>Usage:Each lot of this antibody is quality control tested by immunofluorescent staining<br/>with flow cytometric analysis. For flow cytometric staining, the suggested use of<br/>this reagent is  $\leq 0.5$  microg per million cells in 100 microL volume. It is<br/>recommended that the reagent be titrated for optimal performance for each<br/>application.

 $\ast$  Alexa Fluor  $\circledast$  647 has a maximum emission of 668 nm when it is excited at 633 nm / 635 nm.

Description:	IL-17RB, also known as IL17RH1, belongs to the cytokine receptor family. IL-17RB possesses a unique intracellular signaling molecule called SEFIR, and is expressed similarily to fibroblast growth factor genes and IL-17R. It is reported to be expressed on iNKT cells, innate lymphoid cells (ILC), and Th2 cells. It binds IL-17B and IL-17E (IL-25) but not IL-17A or C. Its interaction with IL-25 has a higher affinity than that with IL-17B. Binding of IL-17RB and IL-25/IL-17E induces NF-kB mediated IL-8 production through interaction with TRAF6 and Act1. IL-17RB has been reported to play a role in autoimmune diseases such as rheumatoid arthritis and asthma.
