## **Product Data Sheet**

## APC anti-rat CD3

Catalog # / Size: 1607070 / 100 µg

1607065 / 25 µg

Clone: 1F4

Isotype: Mouse IgM, κ

F344 rat spleen cells stimulated with Immunogen:

PMA and calcium ionophore

**Reactivity:** 

**Preparation:** The antibody was purified by affinity

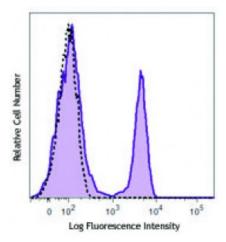

chromatography and conjugated with APC under optimal conditions. The solution is free of unconjugated APC and

unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: **NULL** 

Lewis rat splenocytes were stained with CD3 (clone 1F4) APC (filled histogram) or mouse IgM, κ APC isotype control (open histogram).

## **Applications:**

**Applications:** Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of

this reagent is ≤1.0 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each

application.

**Application** 

Notes:

Immobilized 1F4 antibody can induce T cell proliferation in vitro. Additional reported applications (for relevant formats of this clone) include: immunohistochemistry of acetone-fixed frozen sections1 and formaldehyde-fixed paraffin embedded sections<sup>4,5</sup> immunofluorescence microscopy3, in vivo activation of T cell responses1, and in vivo inhibition of T cell responses2.

**Description:** CD3 is a complex composed of  $\delta$ ,  $\gamma$ ,  $\epsilon$ , and  $\zeta$  chains. They are 20-25 kD members

of the immunoglobulin superfamily and associated with the T cell receptor (TCR). CD3 is expressed on thymocytes, peripheral T cells, some NKT cells, and dendritic epidermal T cells. CD3 is involved in antigen recognition, signal

transduction, and T cell activation.
