PerCP/Cy5.5 anti-rat CD45RA

Catalog # / Size: 1611590 / 100 µg

1611585 / 25 μg

Clone: OX-33

Isotype: Mouse IgG1, κ

Leukocyte common antigen purified Immunogen:

from rat splenocytes.

Reactivity: Rat

Preparation: The antibody was purified by affinity

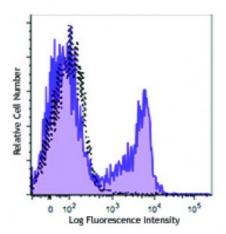

> chromatography and conjugated with PerCP/Cy5.5 under optimal conditions. The solution is free of unconjugated PerCP/Cy5.5 and unconjugated

antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2

LOU rat splenocytes were stained with CD45RA (clone OX-33) PerCP/Cy5.5 (filled histogram) or mouse IgG1, κ PerCP/Cy5.5 isotype control (open histogram).

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤1.0 microg per million cells in 100 microL volume. It is

recommended that the reagent be titrated for optimal performance for each

application.

* PerCP/Cy5.5 has a maximum absorption of 482 nm and a maximum emission of

690 nm.

Application Notes: Additional reported applications (for the relevant formats) include:

immunohistochemistry of acetone-fixed frozen sections1.

Application References:

Description: CD45 is a protein tyrosine phosphatase with multiple isoforms differing as a result

of alternative splicing of the extracellular domain and glycosylation. CD45 is expressed on all hematopoietic cells except erythrocytes and platelets. CD45RA is one of the CD45 isoforms with a molecular weight of 200-220 kD. It is expressed almost exclusively on B cells. CD45 functions in signal transduction through T and B cell antigen receptors. CD45 has been shown to interact with various proteins,

including galectin-1, CD2, CD3, and CD4.
