Product Data Sheet

PE anti-rat CD90/mouse CD90.1 (Thy-1.1)

Catalog # / Size:	1612615 / 50 μg 1612620 / 200 μg
Clone:	OX-7
Isotype:	Mouse IgG1, к
Immunogen:	Rat thymocyte Thy-1 antigen
Reactivity:	Other
Preparation:	The antibody was purified by affinity chromatography, and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and unconjugated antibody.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
Concentration:	0.2

LOU rat thymocytes stained with OX-7 PE

Applications:

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 0.25 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.
Application Notes:	The OX-7 antibody reacts with rat CD90 and mouse CD90.1 (Thy-1.1) (which is expressed by mouse strains of AKR/J, PL, and FVB/N), but not mouse CD90.2.
Application References:	 Additional reported applications (for the relevant formats) include: immunohistochemical⁷ and immunofluorescent⁸ staining of acetone-fixed frozen sections and zinc-fixed paraffin-embedded sections, immunoprecipitation1, Western blotting1, <i>in vitro</i> activation of leukocytes2, induction of endothelial cell permeability3, induction of apoptosis in glomerular mesangial cells, and induction of glomerulonephritis <i>in vivo</i>4. 1. Description:	CD90, also known as Thy-1, is a 28-30 kD GPI-linked membrane glycoprotein. It is a member of the immunoglobulin superfamily and has been shown to interact with CD45 in signal transduction during lymphocyte proliferation and differentiation. CD90 is expressed on hematopoietic stem cells, neurons, thymocytes, peripheral T cells, fibroblasts, stromal cells.
