## **Product Data Sheet**

## PE/Dazzle™ 594 anti-human CD11a

Catalog # / Size: 2106155 / 25 tests

2106160 / 100 tests

Clone: HI111

**Isotype:** Mouse IgG1, κ

Reactivity: Human, Non-human primate

**Preparation:** The antibody was purified by affinity

chromatography and conjugated with PE/Dazzle™ 594 under optimal conditions. The solution is free of unconjugated PE/Dazzle™ 594 and

unconjugated antibody.

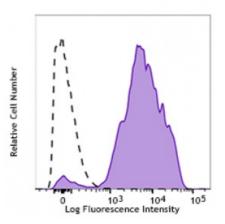

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA).

Workshop Number: **IV N231** 

Concentration: Lot-specific

Human peripheral blood lymphocytes were stained with HI111 PE/Dazzle™ 594 (filled histogram) or mouse IgG1

## **Applications:**

**Applications:** Flow Cytometry

Recommended

**Usage:** 

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5  $\mu$ l per million cells or 5  $\mu$ l per 100  $\mu$ l of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.

\* PE/Dazzle™ 594 has a maximum excitation of 566 nm and a maximum emission of 610 nm.

Application Notes: Clone HI111 epitope maps to the top region of the I domain that is close to the putative ligand-binding site surrounding the MIDAS (metal ion-dependent adhesion site). HI111 is specific for the closed confirmation of the integrin<sup>8</sup>. Additional reported applications (for the relevant formats) include: immunohistochemical staining of acetone-fixed frozen sections, Western blotting<sup>2</sup>, and blocking of cell-cell interaction and inhibition the binding of ICAM-1<sup>4</sup>. This clone was tested in-house and does not work on formalin fixed paraffinembedded (FFPE) tissue.

**Application** 1. Lub M, *et al.* 1995. *Immunol. Today* 16:479. **References:** 2. Parsons J. 1996. *Curr. Opin. Cell Biol.* 8:146.

**Description:** CD11a is a 170-180 kD type I transmembrane glycoprotein also known as LFA-1α

chain and integrin  $\alpha_L$  subunit. CD11a non-covalently associates with integrin  $\beta_2$ 

(CD18) to form LFA-1. It is expressed on all leukocytes, including B and T lymphocytes, monocytes, macrophages, neutrophils, basophils and eosinophils. It is absent on non-hematopoietic tissues and platelets. CD11a plays a central role in leukocyte cell-cell interactions and is important in lymphocyte costimulation. CD11a/CD18 binds to ICAM-1 (CD54), ICAM-2 (CD102), and ICAM-3 (CD50).

**Antigen** 1. Lub M, *et al.* 1995. *Immunol. Today* 16:479.
