## **Product Data Sheet**

## Pacific Blue<sup>™</sup> anti-human CD25

Catalog # / Size:	2113100 / 100 μg 2113135 / 100 tests	
Clone:	BC96	
Isotype:	Mouse IgG1, к	nber
<b>Reactivity:</b>	Human	ell Nu
Preparation:	The antibody was purified by affinity chromatography, and conjugated with Pacific Blue <sup>™</sup> under optimal conditions. The solution is free of unconjugated Pacific Blue <sup>™</sup> .	Relative Cell Numbe
Formulation:	test size: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA (origin USA). microg sizes: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.	PH pe sta Pa
Workshop Number:	V T-072	mo
Concentration:	test size: lot-specific; microg sizes: 0.5 mg/ml	

PHA-stimulated (3 day) human beripheral blood lymphocytes were stained with CD25 (clone BC96) Pacific Blue™ (filled histogram) or mouse IgG1, κ Pacific Blue™ isotype control (open histogram).

## **Applications:**

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. <b>For test size</b> , the suggested use of this reagent for immunofluorescent staining is 5 microL per $10^6$ cells in 100 microL volume. <b>For microg sizes</b> , the suggested use of this reagent for immunofluorescent staining is $\leq 1.0$ microg per $10^6$ cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.
	* Pacific Blue <sup>™</sup> has a maximum emission of 455 nm when it is excited at 405 nm. Prior to using Pacific Blue <sup>™</sup> conjugate for flow cytometric analysis, please verify your flow cytometer's capability of exciting and detecting the fluorochrome.
Application Notes:	Additional reported applications include: immunofluorescence3.

Description:	CD25 is a 55 kD type I transmembrane glycoprotein also known as the low affinity IL-2 receptor $\alpha$ chain or Tac. It is expressed on progenitor lymphocytes, activated T and B cells, and activated monocytes/macrophages. CD25 is also expressed on a subset of non-stimulated CD4 <sup>+</sup> T cells termed T regulatory cells. CD25 associates with the IL-2 receptor $\beta$ (CD122) and common $\gamma$ chains (CD132) to form the high affinity IL-2R complex.
