Product Data Sheet

CD4

Brilliant Violet 785[™] anti-human CD25

 Clone: BC96 Isotype: Mouse IgG1, κ Reactivity: Human Preparation: The antibody was purified by affinity chromatography and conjugated with Brilliant Violet 785[™] under optimal conditions. The solution is free of unconjugated Brilliant Violet 785[™] and unconjugated antibody. Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and BSA 	Catalog # / Size:	2113185 / 25 tests 2113190 / 100 tests	10.5
Reactivity: Human Preparation: The antibody was purified by affinity chromatography and conjugated with Brilliant Violet 785™ under optimal conditions. The solution is free of unconjugated Brilliant Violet 785™ and unconjugated antibody. Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and BSA	Clone:	BC96	582 ×

Applications:

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤ 5 microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.
	Brilliant Violet 785 [™] excites at 405 nm and emits at 785 nm. The bandpass filter 780/60 nm is recommended for detection, although filter optimization may be required depending on other fluorophores used. Be sure to verify that your cytometer configuration and software setup are appropriate for detecting this channel. Refer to your instrument manual or manufacturer for support. Brilliant Violet 785 [™] is a trademark of Sirigen Group Ltd.
	This product is subject to proprietary rights of Sirigen Inc. and is made and sold under license from Sirigen Inc. The purchase of this product conveys to the buyer a non-transferable right to use the purchased product for research purposes only. This product may not be resold or incorporated in any manner into another product for resale. Any use for therapeutics or diagnostics is strictly prohibited. This product is covered by U.S. Patent(s), pending patent applications and foreign equivalents.
Application Notes:	Additional reported applications include: immunofluorescence3.

Description: CD25 is a 55 kD type I transmembrane glycoprotein also known as the low affinity

For research use only. Not for diagnostic use. Not for resale. Sony Biotechnology Inc. will not be held responsible for patent infringement or other violations that may occur with the use of our products. Sony Biotechnology Inc. 1730 North First Street, San Jose, CA 95112 www.sonybiotechnology.com IL-2 receptor α chain or Tac. It is expressed on progenitor lymphocytes, activated T and B cells, and activated monocytes/macrophages. CD25 is also expressed on a subset of non-stimulated CD4⁺ T cells termed T regulatory cells. CD25 associates with the IL-2 receptor β (CD122) and common γ chains (CD132) to form the high affinity IL-2R complex.
