## **Product Data Sheet**

## Brilliant Violet 421<sup>™</sup> anti-human CD33

Catalog # / Size:	2117075 / 25 tests 2117080 / 100 tests	
Clone:	WM53	
Isotype:	Mouse IgG1, κ	
Immunogen:	Human myeloid leukaemia cells.	Relative Cell Number
<b>Reactivity:</b>	Human	2
Preparation:	The antibody was purified by affinity chromatography and conjugated with Brilliant Violet 421 <sup>™</sup> under optimal conditions. The solution is free of unconjugated Brilliant Violet 421 <sup>™</sup> and unconjugated antibody.	0 10 <sup>2</sup> 10 <sup>3</sup> 10 <sup>4</sup> 10 <sup>5</sup> Log Fluorescence Intensity
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and BSA (origin USA).	Human peripheral blood monocytes were stained with CD33 (clone WM53) Brilliant Violet 421 <sup>™</sup> (filled
Workshop Number:	IV M-505	histogram) or mouse IgG1, κ Brilliant Violet 421™ isotype control (open histogram).
<b>Concentration:</b>	Lot-specific	

## **Applications:**

Flow Cytometry
Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is $\leq 5$ microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.
Brilliant Violet 421 <sup>™</sup> excites at 405 nm and emits at 421 nm. The standard bandpass filter 450/50 nm is recommended for detection. Brilliant Violet 421 <sup>™</sup> is a trademark of Sirigen Group Ltd.
This product is subject to proprietary rights of Sirigen Inc. and is made and sold under license from Sirigen Inc. The purchase of this product conveys to the buyer a non-transferable right to use the purchased product for research purposes only. This product may not be resold or incorporated in any manner into another product for resale. Any use for therapeutics or diagnostics is strictly prohibited. This product is covered by U.S. Patent(s), pending patent applications and foreign equivalents.
Additional reported applications (for the relevant formats) include: immunoprecipitation, Westrn blotting3, induction of cytokine production3, and immunofluorescence4. The LEAF <sup><math>m</math></sup> purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 303410).

Description:	CD33 is a 67 kD type I transmembrane glycoprotein also known as Siglec-3, gp67, and p67. It is a sialoadhesion immunoglobulin superfamily member expressed on myeloid progenitors, monocytes, granulocytes, dendritic cells and mast cells. CD33 is absent on normal platelets, lymphocytes, erythrocytes and hematopoietic stem cells. CD33 functions as a sialic acid-dependent cell adhesion molecule with carbohydrate/lectin binding activity.
	carbonyarace, rectin binang activity.
