## **Product Data Sheet**

## Alexa Fluor® 700 anti-human CD45RA

**Catalog #** / 2120600 / 100 μg

**Size:** 2120595 / 25 μg

Clone: HI100

**Isotype:** Mouse IgG2b, κ

Reactivity: Human

**Preparation:** The antibody was purified by affinity

chromatography, and conjugated with Alexa Fluor® 700 under optimal

conditions.

**Formulation:** Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Workshop Number: **IV N906** 

**Concentration:** 0.5

Human peripheral blood

lymphocytes stained with HI100

Alexa Fluor® 700

## **Applications:**

**Applications:** Flow Cytometry

Recommended

**Usage:** 

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. The suggested use of this reagent is  $\leq 1.0$  microg per million cells in 100 microL volume. It is highly recommended that the reagent be titrated for optimal performance for each application.

\* Alexa Fluor® 700 has a maximum emission of 719 nm when it is excited at

633 nm / 635 nm. Prior to using Alexa Fluor® 700 conjugate for flow

cytometric analysis, please verify your flow cytometer's capability of exciting

and detecting the fluorochrome.

Application Notes:

Additional reported applications (for relevant formats of this clone) include: inhibition of CD45 functions2, immunohistochemical staining of frozen tissue sections3 and formalin-fixed paraffin-embedded tissue sections4, and

immunofluorescence<sup>15,16</sup>.

## **Description:**

CD45RA is a 205-220 kD single chain type I glycoprotein. It is an exon 4 splice variant of the tyrosine phosphatase CD45. The CD45RA isoform is expressed on resting/naïve T cells, medullary thymocytes, B cells and monocytes. CD45RA enhances both T cell receptor and B cell receptor signaling. CD45 non-covalently associates with lymphocyte phosphatase-associated phosphoprotein (LPAP) on T and B lymphocytes. CD45 has been reported to be associated with several other cell surface antigens including CD1, CD2, CD3, and CD4. CD45 has also been reported to bind galectin-1. CD45 isoform expression can change in response to cytokines.
