# **Product Data Sheet**

### Spark YG™ 581 anti-human CD45RA

**Catalog #** / 2120865 / 25 tests

**Size:** 2120870 / 100 tests

Clone: HI100

**Isotype:** Mouse IgG2b, κ **Reactivity:** Human, Other

Preparation: The antibody was purified by affinity

chromatography and conjugated with

Spark YG<sup>™</sup> 581 under optimal

conditions.

Formulation: Phosphate-buffered solution, pH 7.2,

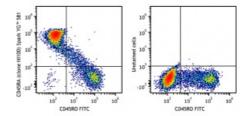

containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA)

Workshop Number: IV N906

Concentration: Lot-specific

Human peripheral blood lymphocytes were stained with anti-human CD45RO FITC and CD45RA (clone HI100) Spark YG™ 581 (left) or only stained with anti-human CD45RO FITC (right).

#### **Applications:**

**Applications:** Flow Cytometry

Recommended

**Usage:** 

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5  $\mu L$  per million cells in 100  $\mu L$  staining volume or 5  $\mu L$  per 100  $\mu L$  of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.

\* Spark YG™ 581 has a maximum excitation of 562 nm and a maximum

emission of 581 nm.

Application Notes:

Additional reported applications (for relevant formats of this clone) include: inhibition of CD45 functions<sup>2</sup>, immunohistochemical staining of frozen tissue sections<sup>3</sup> and formalin-fixed paraffin-embedded tissue sections <sup>4</sup>, and immunocytochemistry  $^{15,16}$ .

#### Description:

CD45RA is a 205-220 kD single chain type I glycoprotein. It is an exon 4 splice variant of the tyrosine phosphatase CD45. The CD45RA isoform is expressed on resting/naïve T cells, medullary thymocytes, B cells and monocytes. CD45RA enhances both T cell receptor and B cell receptor signaling. CD45 non-covalently associates with lymphocyte phosphatase-associated phosphoprotein (LPAP) on T and B lymphocytes. CD45 has been reported to be associated with several other cell surface antigens including CD1, CD2, CD3, and CD4. CD45 has also been reported to bind galectin-1. CD45 isoform expression can change in response to cytokines.
