## **Product Data Sheet**

## PE anti-human CD80

| Catalog # / Size:     | 2126035 / 25 tests<br>2126040 / 100 tests   |
|-----------------------|---|
| Clone:                | 2D10  |
| Isotype:              | Mouse IgG1, к   |
| <b>Reactivity:</b>    | Human   |
| Preparation:          | The antibody was purified by affinity<br>chromatography, and conjugated with<br>PE under optimal conditions. The<br>solution is free of unconjugated PE and<br>unconjugated antibody. |
| Formulation:          | Phosphate-buffered solution, pH 7.2,<br>containing 0.09% sodium azide and<br>0.2% (w/v) BSA (origin USA).   |
| Workshop<br>Number:   | VI CD80.1   |
| <b>Concentration:</b> | Lot-specific  |

Human B-cell Burkitt's lymphoma cell line Daudi stained with 2D10 PE

## **Applications:**

| Applications:              | Flow Cytometry   |
|----------------------------|--|
| Recommended<br>Usage:      | Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. <b>Test size products are transitioning from 20 microL to 5 microL per test</b> . Please check your vial or your CoA to find the suggested use of this reagent per million cells in 100 microL staining volume or per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.   |
| Application<br>Notes:      | Additional reported applications (for the relevant formats) include: <i>in vitro</i> blocking of T cell activation, immunohistochemical staining of acetone-fixed frozen tissue sections2, immunoprecipitation, and Western blotting3. The LEAF <sup><math>m</math></sup> purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 305212).  |

| Description:               | CD80, also known as B7-1, B7, and BB1, is a 60 kD single chain type I glycoprotein<br>belonging to the immunoglobulin superfamily. CD80 is expressed on activated B<br>and T cells, macrophages, and dendritic cells. CD80 binds to CD28 and CD152<br>(CTLA-4). Along with CD86, CD80 plays a critical role in regulation of T cell<br>activation. The interaction of CD80 with CD28 provides a potent costimulatory<br>signal for T cell activation through the CD3 complex, while its interaction with<br>CTLA-4 provides an inhibitory signal for T cell activation.  |
